

FOUNDATION'S MAS i MANJON
BARCELONA

The Research Department Mas i Manjon Foundation presents a research task initiated in 1980 a study presentation psychological response, cognitive, affective and biological interaction Rorschach Plates and electroencephalography.

The study shows two significant sections of the research:

- An analytically examining the interaction section of the proposed of the research hypothesis.
- Another section showing the possibility of inducing cognitive changes in the xperimental subject's response.

The presentation will be progressively exposed plate to plate Rorschach. (the process of experiment is shown in arbitrarily based on the time available research department).

In this first sample, we have placed Rorschach plates.
